

THE WOLF FILES

The 3 Fences

The three traps that keep the flock poor.

A short field guide to the fences you can't
see – and why the people who can see them
never stay broke.

A fence only works on you **if you don't know it's there.**

The flock isn't poor because it's lazy. It's poor because the field is built that way — fenced, on purpose, by people who profit from the grazing.

Nobody sat you down and explained the rules, because a flock that can count is a flock you can't shear. So the fences stay invisible. You feel them — the paycheck that never stretches, the savings that quietly shrink, the sense that you're running to stand still — but you can't see them.

This is three of them. Just three. Read it once and you won't be able to un-see them — and that's the whole point. The wolf isn't smarter than the sheep. He just looked at the fence.

Let's walk the line.

The Money Fence

Your money was never saved up and lent to you. It was created from nothing — the moment you signed.

You're taught that a bank takes deposits from savers and lends them to borrowers. It doesn't. When a bank gives you a loan, it **creates the money on the spot** — typing the number into your account. It didn't have it. It conjured it against your promise to repay.

This isn't a conspiracy theory. The Bank of England spelled it out in writing in 2014:

"banks create new money" whenever they make a loan. Most of the money in the world exists this way — as debt, with interest attached.

Which means the system needs you in debt. Not as a side effect — as the **engine**. Every mortgage, every card, every car loan is fresh money created with a keystroke, and you spend years of your life paying back the interest on something that cost the bank nothing to make.

THE FLOCK

Borrows, then spends decades paying interest on money that was typed into existence.

THE WOLF

Borrows the bank's keystroke money too — but to buy assets that pay the interest for him.

*The Matrix goes further: **why there is never enough money in the system to repay all debt + interest** — and who designed it that way, in 1913. (p.10, p.20)*

The Inflation Fence

Inflation isn't "prices going up." It's your money being quietly moved to someone standing closer to the printer.

You're told inflation is like weather — it just happens, prices rise, nobody's fault. That's the cover story. Inflation is a **transfer**, and it has a direction.

When new money is printed, it doesn't reach everyone at once. It enters at the top first — banks, governments, the largest corporations. They spend it **while prices are still normal**, buying houses, stocks, and businesses at today's numbers. All that buying is what pushes prices up.

By the time the new money trickles down to your wages — maybe a small raise — rent is higher, groceries are higher, the house is out of reach.

Your money is worth less than the day it was printed. You didn't get poorer by accident.

The distance between you and the printer *is* the tax.

THE FLOCK

Holds cash and "saves," watching it melt a little every year at the back of the line.

THE WOLF

Holds the things inflation lifts — and stands as close to the tap as he can get.

*The Matrix maps it cold: **which assets no central bank can print**, and how the wealthy buy them with the bank's own money. (p.23, p.44)*

The Salary Fence

"Employee" is the most heavily taxed position the system has. By design — not by accident.

Here is the quiet rule almost nobody is shown: an employee is **taxed before they're paid**. The money is cut at the source — you only ever touch what's left. Then you live on the remainder.

A business does it backwards. It earns, **subtracts its costs first** — its car, its travel, its equipment, its lunches — and is taxed only on what's left at the bottom. Same dollar, opposite order. One order keeps you grazing; the other compounds.

This is why "get a good job and work hard" quietly caps you. It's not bad advice morally — it's just the **most exposed legal position there is**. The wealthy don't earn as employees. They earn through companies, trusts, and structures that were built to do the subtracting first.

THE FLOCK

Trades hours for a wage that's taxed before it arrives — and calls the leftover "income."

THE WOLF

Earns through a structure that spends first and is taxed last — legally, on purpose.

*The Matrix names the structures — and the **183-day rule the wealthy use to legally choose where they pay tax**: real countries at 10%, 4%, 0%. (p.37, p.41)*

YOU'VE SEEN THREE

There are **dozens.**

Three fences and you already feel the field differently. Now imagine the whole map — every fence, and the gate out of each one, in plain language, with the real mechanisms and numbers.

That's **The Money Matrix**: 43 pages on exactly how the system is built, and how to legally turn it to your side. Part IV starts with moves that cost nothing — knowing your numbers, your exposure, your options.
